

EZALERTATOR

How to integrate ezalert.me into [zabbix](https://zabbix.com).

Ezalert.me is a nice service (thanks to Maurizio Giunti) that enables you to send alerts via Telegram, Skype or Facebook Messenger.

I was searching long time for a service like this to enable my Zabbix Monitor system to send alerts notification to system administrator in a faster way than emails.

So I developed ezalertator.pl and configured it with success into my system.

In the following pages you can find a brief description of how to do that.

Many thanks

Fiilppo

“How I did it” (cit. by Victor Frankenstein)

1. Download eزالertator.pl ad put it into default Zabbix script folder: /usr/lib/zabbix/alertscripts
2. Create a new media under Administration -> Media Types and call it whatever you want. See pic 1 and pic 2.

Name	Type	Status	Used in actions	Details
Email	Email	Enabled		SMTP server: "127.0.0.1", SM
ezalert.me	Script	Enabled		Script name: "ezalertator.pl"

Pic 1

Name: ezalert.me
Type: Script
Script name: ezalertator.pl

Script parameters:

Parameter	Action
-k {ALERT.SENDTO}	Remove
-x {ALERT.MESSAGE}	Remove

Enabled: ☒

Buttons: Update, Clone, Delete, Cancel

Pic 2

3. Modify the user that should receive the alert as described in pic 3. You can see standard email notification and brand new ezalert.me. In the “send to” field you should specify the channel ID created in the ezalert.me administration page.

Media	Type	Send to	When active	Use if severity	Status	Action
Email	Email	supporto@	1-7,00:00-24:00	NIWAHD	Enabled	Edit Remove
ezalert.me 10	Script	[redacted]	1-7,00:00-24:00	NIWAHD	Enabled	Edit Remove

Buttons: Update, Delete, Cancel

Pic 3

4. Be sure that the action you created have “via all media” specified as pic 4 to start receiving notifications.

☐ Report problems to Zabbix administrators

Maintenance status not in maintenance
Trigger severity >= Not classified

Send message to user groups: Zabbix administrators via all media
